

Scanning Print Photos Tips and Tricks

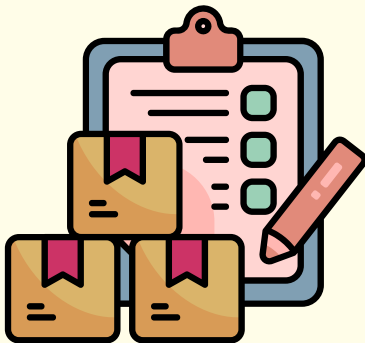

ORGANIZE FIRST

Organize and pare down your print photos first, so that when you digitize, the photos will be organized and named intelligently. This will save you time and money. [DIG YOUR PHOTOS!](#) can help if you want to organize yourself.

INVENTORY BEFORE

If you are sending the scanning out, inventory your collection so that you can ensure you receive all your memories back.

RESOLUTION COUNTS

Prepare for the need to print these photos again, as in a photo book or celebration poster. I suggest scanning at 600dpi for a print photo.

BACK UP

Once your photos are digitized, backup those and all your other digital photos to a computer, external hard drive or a true cloud backup service. Apple Photos is not a backup service, it is a synching service.

You will have peace knowing you have
